Re: My personal recommendation and endorsement of Sports Field Engineering

Dear Fellow Associates,

It is with pleasure that I recommend Sports Field Engineering for your consideration with athletic fields and facilities improvement. The comfort and relationship that my school has developed with them is the best we have experienced in the industry. They have unparalleled professionalism, and every member of the SFE team, from installer to CEO, makes us feel like a priority. They listen to our requests and have exceeded our expectations.

We recently asked SFE to deliver a state-of-the-art baseball synthetic turf playing surface, and they did. Our coaches and players say it plays like a natural grass and dirt field, the ball stays down, it stays true, it plays fast, and the planarity is like nothing they have seen.

This field makes our facility second to none, and opens up the possibility of becoming an even bigger part of the Ohio community by allowing us to start hosting state high school playoff games and more. We also asked SFE to embrace the uniqueness of our program, and help us emphasize it, and this field also does that. Along with our Cardinal coloring, their turf brings a uniqueness to our ballpark unlike any other in America and will dramatically help our national recruiting efforts. This field's uniqueness in look and feel resonates within our university, our community, and to our recruits.

I highly recommend Sports Field Engineering for their expertise and product superiority to anyone looking to build a synthetic turf field.

Sincerely,

A handwritten signature in blue ink that reads "Chris Adams".
